

# A Quick Guide to **DMN**

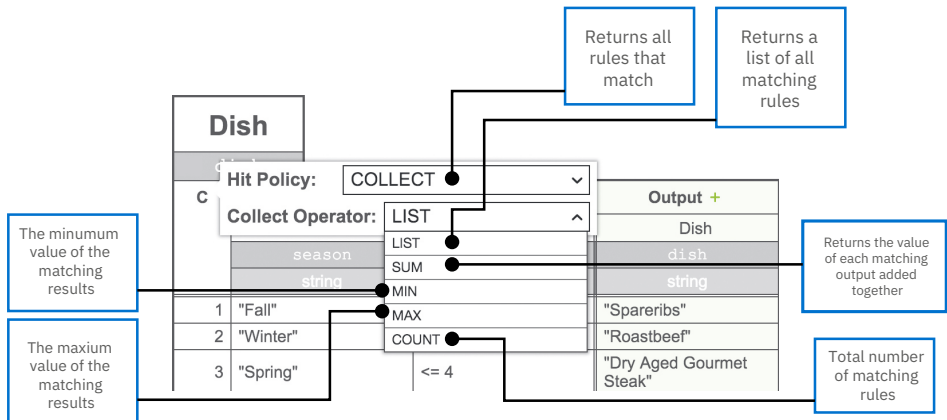

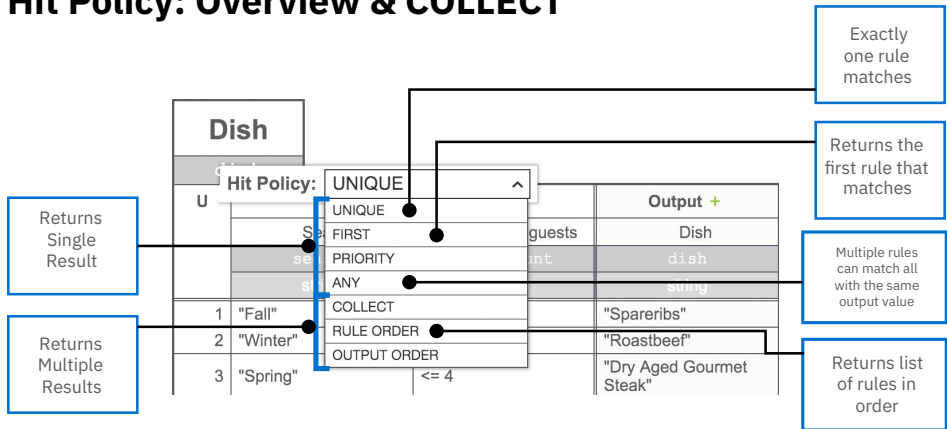

## The DMN-Table:

## Design & Implementation Point of View

## Hit Policy: Overview & COLLECT

# FEEL (Friendly Enough Expression Language)

| DataType | Example                              |
|----------|--------------------------------------|
| String   | “ninja”                              |
| Numeric  | >12                                  |
| Boolean  | true                                 |
| Date     | date and time(“2016-03-16T12:00:00”) |

| Numeric Comparison                    | Description  |
|---------------------------------------|--|
| 10                                    | Tests if the input value is equal to 10              |
| <10                                   | Tests if the input value is less than 10             |
| <=10                                  | Tests if the input value is less than or equal to 10 |
| >10                                   | Tests if the input value is greater than 10          |
| >date and time(“2016-03-16T12:00:00”) | Dates can also be used for comparison                |

## FEEL – Numeric Ranges

| Numeric Range | Description   |
|---------------|---|
| [1..10]       | Input is between 1 and 10 – including both 1 and 10   |
| ]1.. 10]      | Input is between 2 and 10 – 1 is not included   |
| ]1.. 10[      | Input is between 2 and 9 – 1 and 10 are not included  |
| [1.. 10[      | Input is between 1 and 9 – 10 is not included   |
| (1.. 10)      | “(” and “)” have the same meaning as “[” and “[“ so this would be:<br>Input is between 2 and 9; 1 and 10 are not included |

| Date Range  | Description   |
|---|---|
| [date and time(„2015-03-16T12:00:00“)..<br>date and time(2016-03-16T12:00:00“)] | Input is between and including the two dates<br>shown |

## FEEL – Disjunction and Negation

| Expression              | Description                                    |
|-------------------------|--|
| 3, 5, 7                 | Input is either 3, 5 OR 7                      |
| <2, >10                 | Input is either less than 2 or greater than 10 |
| 10, [20..30]            | Input is either 10 or between 20 and 30        |
| “Accepted”, “Suspended” | Input is either of the two specified strings   |

| Expression        | Description                                    |
|-------------------|--|
| not(3)            | Input is any numeric value other than 3        |
| not(>10)          | Input is any numeric value not greater than 10 |
| not(10, [20..30]) | Input is not equal to 10 or between 20 or 30   |
| not(“Accepted”)   | Input does not match the string “Accepted”     |

### Hint: You can use variables in your expressions

if applicant.maritalStatus in (“M”, “S”) then “valid” else “not valid”

## DRD (Decision Requirements Diagrams)
